It is important to know how to subtract when you buy things at a store. You need to make sure that you get back the right amount of change from the clerk.

LET'S EXPLORE MATH

Jun has \$12.00. He buys a book for \$4.00. The clerk gives him \$8.00 in change. Did the clerk give him the right amount of change? How do you know?

**Shop owners also use subtraction.
They count the number of things they
have in their stores.**
